

Background

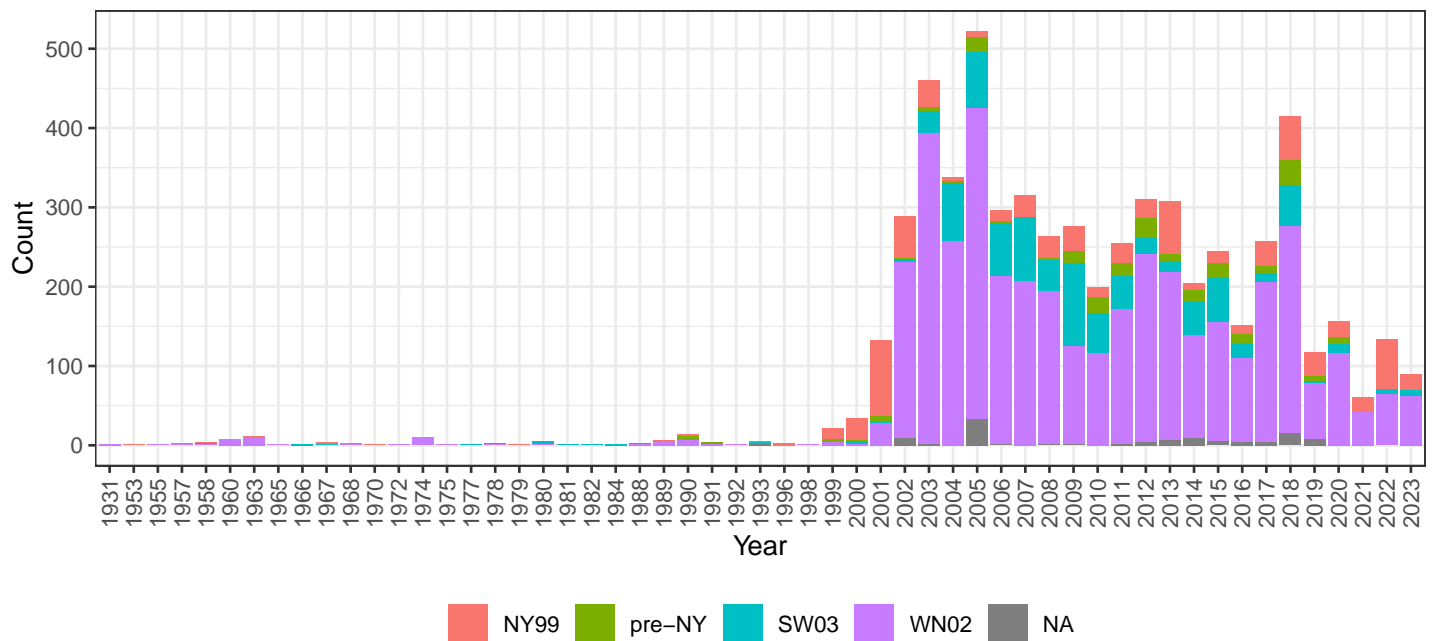

WNV is a X with a single genome of Y length

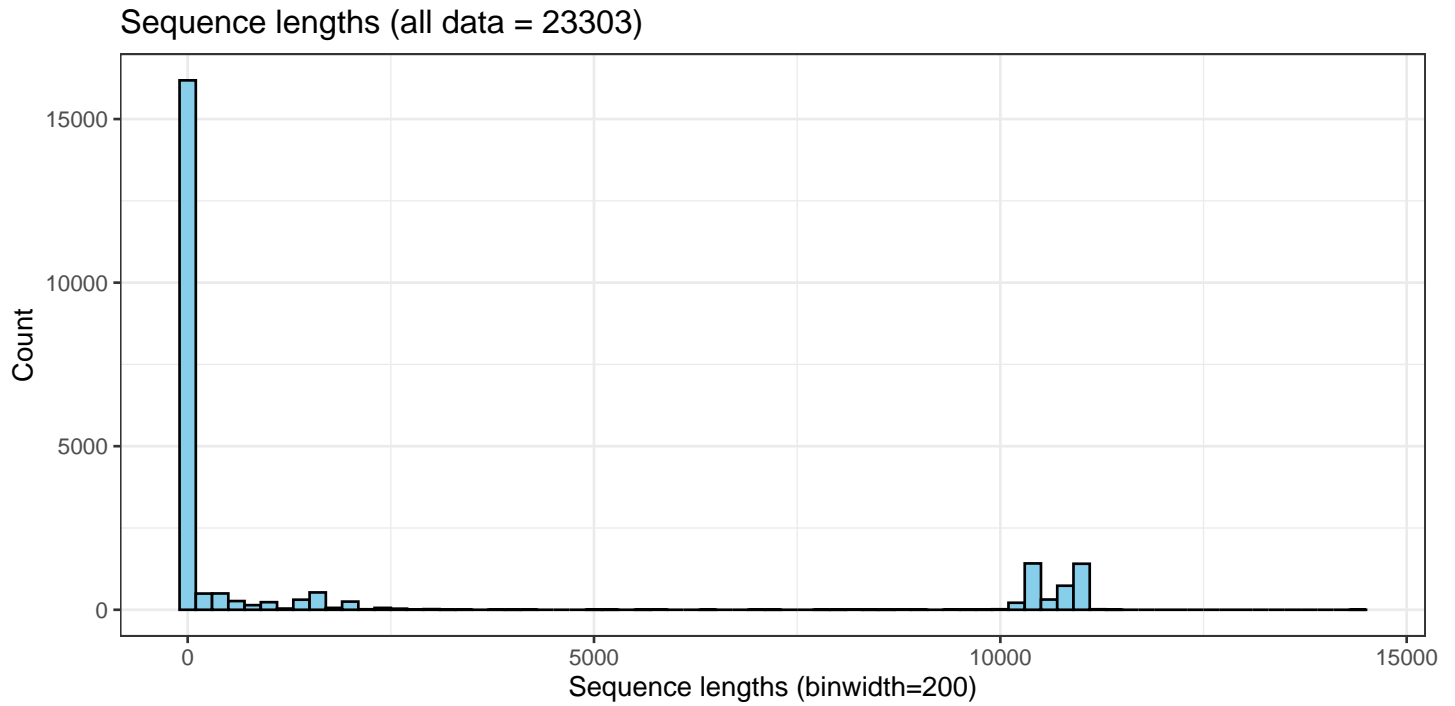

Exploratory Graphics

WNV entries with collection date (n = 5957)

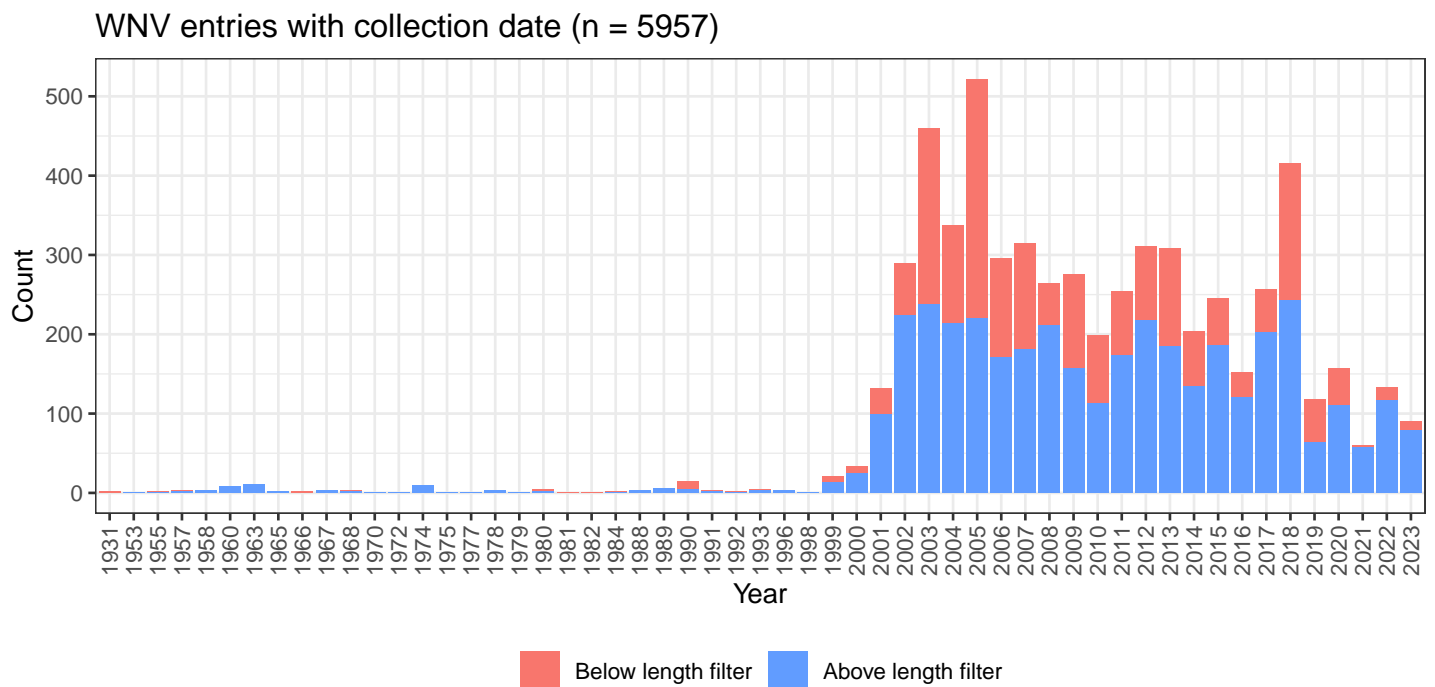

WNV entries with collection date (n = 5957)

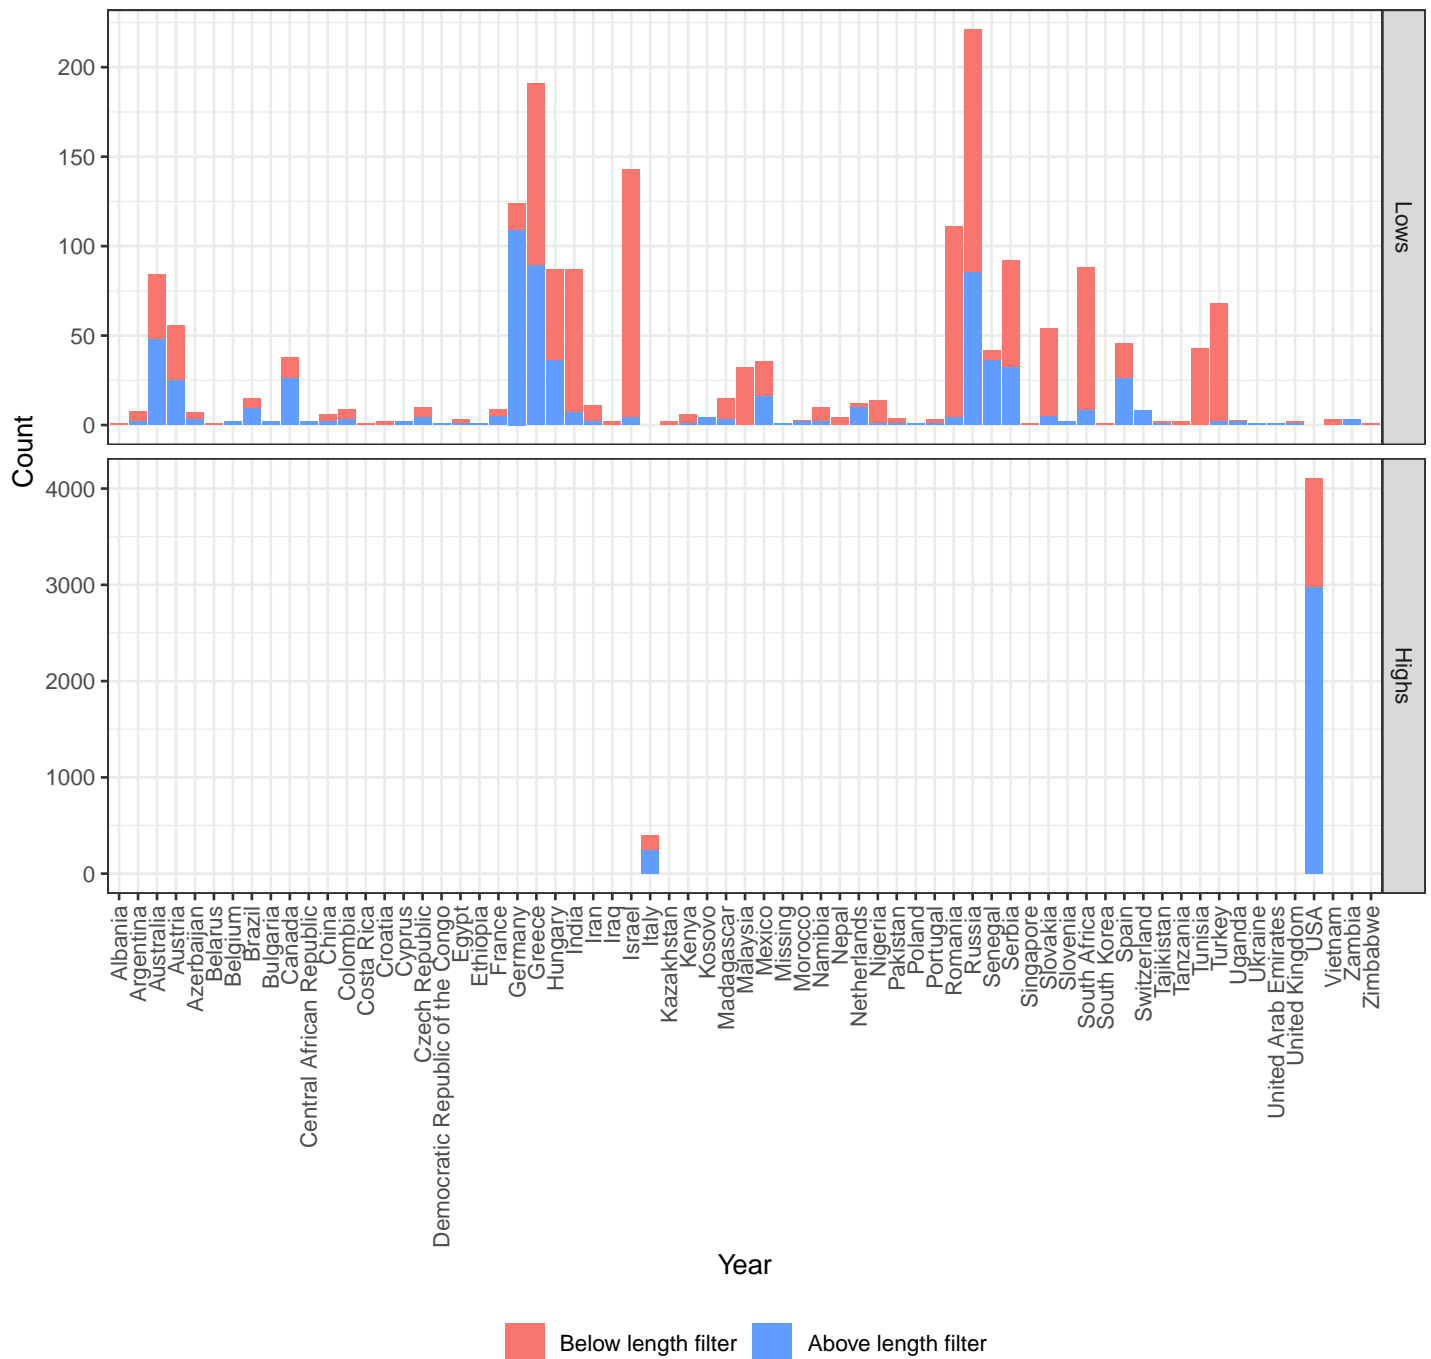

Global subsampling

WNV entries that were above or below filter, by country (n = 4123)

- Total WNV records = 23303. Note how this includes records without collection date
- Total WNV records that passes the length filter = 4123

If this number is lower than 4k, probably don't need to subsample further. Global build might need a different root... not the NY99
